Solutions

Metal tiles from Armstrong Ceilings were specified by Perkins Ogden Architects for a trio of reasons – their acoustic performance, durability and aesthetics. Some 5,000m² of Armstrong’s Orcal 600mm x 600mm microperforated white metal tiles with an acoustic fleece and 300m² of Orcal plain white metal tiles were installed in a range of areas including classrooms, libraries, breakout rooms, corridors and toilets. With Armstrong Ceilings featuring in most of these elements, students are assured of an environment that not only sounds and looks good but is designed to last.
Description

Barnet College’s new £50 million Wood St Campus opened in September 2010 and is simply stunning. With more than 21,000 teenage and adult students, Barnet College became one of the largest Further Education colleges in England when it merged with Hendon College in 2000. But the 1960s buildings comprising its Wood Street campus in the heart of historic Chipping Barnet were exhausted.
