Maximize Comfort, Minimize Cost

Save up to 15%* on energy costs and usage with Templok® Energy Saving Ceilings. These innovative ceilings combine reduced energy costs, exceptional acoustical performance, and increased thermal comfort for a ceiling that contributes to indoor environmental quality for building occupants.

*Measured cooling energy savings in lab test. Results may vary. See Templok Technical Guide for details.

Save up to 50%
in tax credits

Innovation that saves *money*

Save up to 50% in tax credits and make your next project more affordable and save energy with Templok® ceilings. A variety of federal and state income tax credits and deductions for energy-saving products may make your

Templok® ceiling projects a more affordable option than standard mineral fiber ceiling system.

Meet Sustainability Goals *Your Way*

No matter what sustainability or design challenges you're facing, the Armstrong® Sustain® portfolio makes your decisions simpler by offering the largest forward-thinking portfolio of healthy ceiling and wall solutions with verified material transparency and low

- embodied carbon. All products in the Sustain® portfolio share these features:
- Free of Red List "chemicals of concern" as verified by Declare® labels
 - Ingredient transparency assured by Health Product Declarations with consistent reporting of product contents and associated health

- information
- Environmental Product Declarations list life cycle impacts, including embodied carbon ratings
 - Low emissions certification with Indoor Advantage™ Gold that meets California Department of Public Health (CDPH) low emissions standards

Reduce Embodied Carbon in the *Built Environment*

The Armstrong Ceilings Recycling Program provides an efficient solution to reduce construction waste and embodied carbon on commercial renovation projects. Since 1999, the nation's first ceiling recycling program has diverted over 200 million square feet of old ceiling materials from going to the landfill.

What happens to reclaimed ceilings? Once mineral fiber ceilings are received at Armstrong manufacturing locations, old ceilings are processed and become the foundation for new ceilings that have higher post-consumer recycled content.
