Total Acoustics Performance™ provides the ideal combination of sound absorption and sound blocking. Sound absorption reduces noise while sound blocking keeps it from traveling into adjacent spaces. Together these attributes help you create quiet spaces. So whether you are trying to reduce noise in concentration or focus spaces, creating collaborative environments, or working to ensure confidentiality, get total noise control and design flexibility with Total Acoustics ceiling panels.
For WoodWorks®, MetalWorks™, TECTUM® and Shapes Solutions:

Acoustics performance for these ceilings is determined by the product, perforation, and infill panel. See product data pages for detailed information.

Total Acoustics = NRC 0.80+ and CAC 35+

Calla® / Calla® High NRC
Lyra® PB High CAC
Ultima® / Ultima® Health Zone
Ultima® High NRC
WoodWorks® Tegular
WoodWorks® Channeled Tegular
MetalWorks™ Tegular
MetalWorks™ 3D
TECTUM® Tegular

Infill Panel: 2820 2820 2820 2820 2820 1713

Total Acoustics = NRC 0.70-0.75 and CAC 35+ (See product data pages for infill panel options)

Total Acoustics = NRC 0.60-0.65 and CAC 35+

Canyon®
Mesa®
School Zone® Georgian™
Cirrus® Second Look®
Cirrus® Profiles

Infill Panel: 1713

NRC + CAC = Total Acoustics Performance™
Today, noise is the number one complaint in the workplace. Now, you can help solve it with Total Acoustics Performance™.
Ideal Sound Performance for Every Space

Effectively Absorb & Block Sound
- No need for full height, floor-to-deck walls when you specify Total Acoustics® ceiling panels — making future space re-configurations easier.
- No need for extra plenum barriers.

Absorption is Not a Substitute for Blocking
- Ceiling panels with high sound absorption (NRC) and low sound blocking (CAC) are unable to provide the confidential speech privacy that Total Acoustics Performance™ offers.

All ceilings with Total Acoustics Performance™ have a CAC of 35 or higher, the ideal value to deliver the sound blocking you need.
Putting SOUND BLOCKING to the Test

The Truth About Sound Blocking
- Total Acoustics® ceilings with a CAC of 35+ tested in real-world scenarios have been proven to deliver confidential speech privacy.
- Ceiling panels with a low CAC (<35) are unable to achieve the sound blocking that Total Acoustics Performance™ offers.

Ceiling CAC – Critical to Speech Privacy
- Real-world independent acoustical testing in common plenum shared offices confirms that high CAC Total Acoustics panels are essential to achieving speech privacy.

1 Independent Acoustical Measurements and Report by Acentech Inc.

Why CAC Matters
Confidential Speech Privacy

NRC 0.90
CAC 22

HIGH NRC CEILING PANELS

Speech Privacy Index* 82%

* Privacy Index measurement and calculation are defined in ASTM E1130

Field Test Parameters:
- Adjacent Offices (same size)
- Plenum (with no barrier)
- Common Wall (STC 35+)
- Concrete Deck
  (with commercial carpeting)
- Background noise at ASHRAE recommended 42 dBA

Total Acoustics®
celling solutions help provide confidential speech privacy.

ULTIMA® CEILING PANELS

NRC 0.75
CAC 35

Speech Privacy Index* 97%
Studies show that excessive noise at the office reduces worker effectiveness, raises stress, and lowers employee satisfaction. Today’s flexible spaces call for concentration one minute, collaboration the next.

In closed plan areas, noise from open areas plus adjacent spaces can negatively affect confidentiality.

Today’s open plan areas can become tomorrow’s closed plan areas making both absorption (NRC) and blocking (CAC) important for future space flexibility.

Ceilings with Total Acoustics Performance™ not only address quiet concentration, energetic collaboration, and speech privacy in today’s workplace, but everything in between.
BEST
NRC 0.80+ and CAC 35+
High traffic spaces or multipurpose spaces where maximum sound absorption and sound blocking are needed to help keep noise levels down and prevent disruption to adjacent spaces.

BETTER
NRC 0.70-0.75 and CAC 35+
Spaces where strong sound absorption and sound blocking are needed for all-around acoustical performance.

GOOD
NRC 0.60-0.65 and CAC 35+
Spaces where less sound absorption is required but sound blocking is needed to maintain privacy between adjacent areas.
Each day, thousands of students are unable to understand one out of every four spoken words in classrooms due to inadequate ceiling acoustics.

With Total Acoustics® ceiling performance, you’ll meet or exceed ANSI standards, contribute to LEED® points, and create a better place for teachers to teach and students to learn.
BEST
NRC 0.80+ and CAC 35+
High traffic spaces or multipurpose spaces where maximum sound absorption and sound blocking are needed to help keep noise levels down and prevent disruption to adjacent spaces.

BETTER
NRC 0.70-0.75 and CAC 35+
Spaces where strong sound absorption and sound blocking are needed for all-around acoustical performance.

GOOD
NRC 0.60-0.65 and CAC 35+
Spaces where less sound absorption is required but sound blocking is needed to maintain privacy between adjacent areas.
CREATE Peacful Privacy

Excessive noise in corridors, busy nurses’ stations, and chaotic treatment rooms negatively affects patients – as well as interactions between doctors and staff.

Ceilings with Total Acoustics Performance™ help meet HCAHPS, address HIPAA healthcare requirements, and aid in optimum patient recuperation.
