

THE AXIOM® EDGE

FROM PLANNING TO INSTALLATION

Axiom® Trim with Dynamic Curving and ProjectWorks® no-cost pre-construction service assists contractors with bidding, ordering, and installing curved perimeter trim without a hitch. Now you can ensure the desired project design, minimize curve seams, and optimize material.

PRE-CONSTRUCTION PLANNING

- **DRAWING PACKAGE:** ProjectWorks complete drawing package includes a bill of materials with quantities, items, and carton numbers for estimates and takeoffs
- **WASTE OPTIMIZATION:** Axiom dynamic curving optimizes material allowing a single 10' Axiom piece to contain curves and straight sections in the same piece

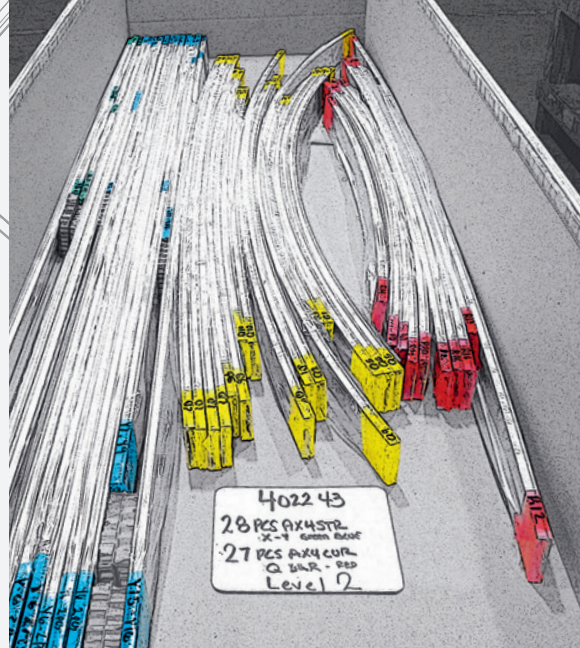

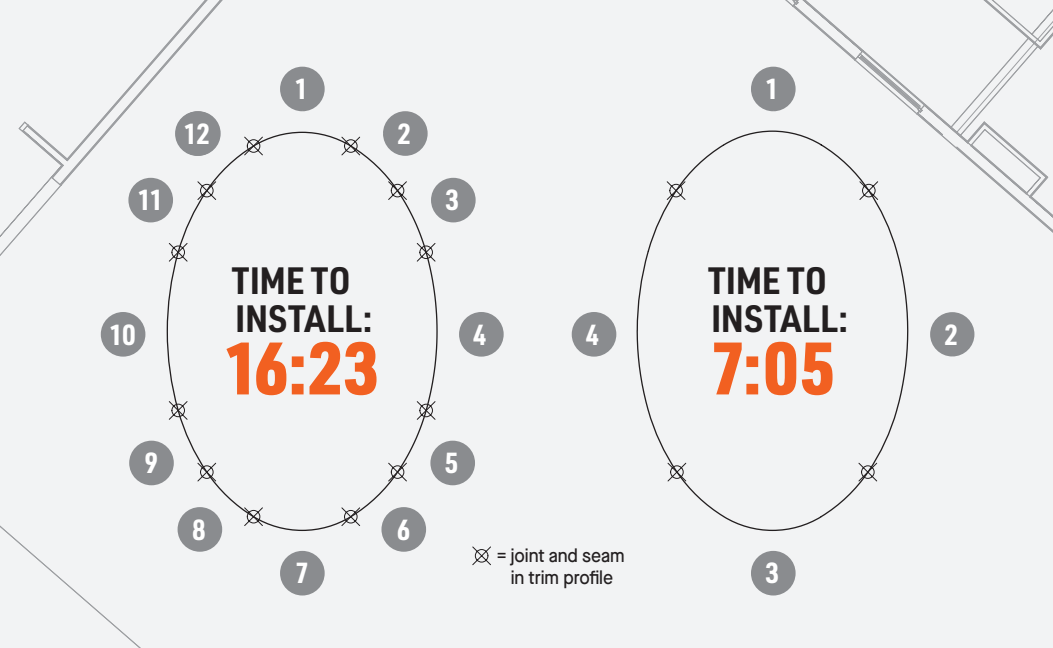

CPC Global Headquarters project had 4,000 LF of winding Axiom trim with multiple straight to tight curved sections and shapes. ProjectWorks worked with Architectural Sales of MN, Inc. to achieve the most efficient, cost effective method to install with the least amount of waste, in the shortest amount of time.

Curved Trim
Each change in radius
requires a different piece

Dynamic Curving Trim
Multi-radii are on a single,
full-length piece of trim

Axiom Parts
Color-coded with packaging,
bill of materials, and drawings

AXIOM®

MANUFACTURED DIFFERENCE

- **AXIOM DYNAMIC CURVING DESIGN:** Single direction custom curving allows Axiom to go from straight to curved and back to straight – fewer seams, less waste and eliminates challenging curved to straight joints
- **FACTORY MITERED:** No-fee, factory miters eliminate on-site labor to cut and fit

HASSLE-FREE INSTALLATION

- **TAKEOFF DRAWING DETAILS:** Detailed RCP layout shows the exact location of each component throughout the project space
- **CRATING & PACKAGING:** Product delivery of color-coded parts and packaging coordinate with the bill of materials to easily match the right parts with the project drawings
